

## Data sheet

### Simply Better IROC® FL for Ground-Mounted PV Systems

The IROC® FL system is designed for ground-mounted PV installations. It features a two-post pile-driving system. The structure is made from aluminum and galvanized steel (special zinc alloy). IROC® FL is a simple, proven, fast, and thus cost-effective mounting system. In the event of a module type change, dismantling the system is not necessary as the connectors between the cross profile and the upper profile are flexible. This also allows for subsequent expansion of the system. Up to six modules can be mounted horizontally. The system allows for clamping the module on either the long or short side.

The mounting system is manufactured from tested materials.

### Advantages:

- ✓ Easy and quick installation
- ✓ Minimal use of material
- ✓ Low usage of tools
- ✓ High quality
- ✓ High flexibility, for different modules
- ✓ Planning according to customer requirements
- ✓ Low transportation costs
- ✓ Corrosion resistant
- ✓ Longtime warranty
- ✓ Pre-assembled clamps
- ✓ Clamps on the short or the long side of the module

<b>Material</b>	Aluminum / Steel
<b>Inclination</b>	15°
<b>Product guarantee</b>	10 years
<b>Module installation</b>	Horizontal
<b>Clamp installation</b>	Short or long side
<b>Installation</b>	With pile driver
<b>Module size</b>	Suitable for all module types
<b>Ramming depth</b>	Flexible, depends on extraction force value
<b>Mounting fasteners</b>	M12 / A2
<b>System type</b>	Ground-Mounted PV System
